

of the national adaptation agenda. Ghana is integrating population dynamics and climate change adaptation and mitigation measures into its overall development agenda.

In addressing the burden of malnutrition, Ghana has committed to ending poverty as per SDG 1; The commitment to the SDGs seeks to improve nutrition and promote sustainable agriculture among the people of Ghana without leaving anyone behind by 2030. Ghana is, thus, implementing a number of interventions to improve nutrition among infants and school- age children.

Furthermore, the Government of Ghana is investing in the agriculture sector with appropriate policies to ensure a healthy population for national development. A recent intervention in place is . It is a five-
