Maja Groff, Esq., Convenor of the CGC,

[m.groff@climategdc.org](mailto:m.groff@climategdc.org)

Your Excellencies,

Thank you for the opportunity to provide input to the UN Summit of the Future 2024 on behalf of the Climate Governance Commission (CGC). The Climate Governance Commission aims to fill a crucial gap in confronting the global climate emergency by developing and building partnerships that promote feasible, high impact global governance solutions for urgent and effective climate and broader Earth system action, to limit global temperature rise to 1.5°C or below. A premise of the Commission is that ne

development banks to account for the new planetary climate, and ecological imperat which now must underpin *all economic development*

2. Reforms to the global financial architecture should include the design of and facilitatio progressive and fair designed taxes at all levels of governance, including the international as well as debt relief for low middle income countries to support sustainable development including climate mitigation and adaptation. Other robust s should be taken to create the requisite fiscal space across diverse nations, such as t the establishment of [International Anti-Corruption Court \(IACC\)](#) and the removal of fossil fuel subsidies.
3. Further efforts must be made to reduce barriers to genuinely sustainable developmen the green transition, [across key](#). This should include a revisiting of global trade and investment rules (and their interpretation) to align with planetary priorities and susta development, and a reduction of IP and licensing restrictions in the green technology s to increase access to technologies critical to sustainable development in low income countries, including through the consideration of establishing a green techno licensing facility.

## Chapter II. International peace and security

4. We recognize the need for a fundamental transformation of global security paradigm take account of the intersection between the triple planetary crisis and very fundan conditions of global security. The international community [has reached a perilous and pivotal moment](#)

contemporary standards of governance fairness and legitimacy, in accordance with international rule of law.

sustainable environment including through [the proposal for special rapporteur group](#) that would be empowered to both investigate and report publicly on environmental violations, and to uphold the newly recognized right to a healthy, clean, sustainable environment. The mandate of such a group should encompass climate and social justice issues, including the protection and inclusion of women, Indigenous peoples, future generations, and other minorities in the climate response.

## Chapter V. Transforming global governance

14. We call on the UN Summit of the Future 2024 to facilitate the UN General Assembly declaring a [planetary emergency](#), recognizing that the triple planetary crisis poses a grave risk to global stability and security, among others, to be reinforced in similar statements by bodies and agencies of the UN system, regional bodies, and national and local governments. Such a declaration could recognize the latest authoritative science and the momentous coordinated efforts needed on an urgent basis to stabilize the Earth system (within the frame of ESJ and a global just transition). It could further urge Member States at subnational levels of government, and international organizations to adopt suitable emergency plans.

15. We recommend the establishment of a [Planetary Emergencies Platform](#), proposed by the UN Secretary General. The Platform could bring together relevant national authorities, the UNFCCC and IPCC, other environmental convention secretariats, relevant international organizations, as well as the World Bank, Green Fund (GFCF), and other financing bodies (to ensure speed and scale in funding and pro(na)4 (I)-2 (

17. We call on the UN Summit of the Future 2024 to support efforts to adapt international law to the Anthropocene and facilitate next
